Compatibility and phytotoxicity

JABOLIM has no phytotoxicity, so can be applied at any stage of the crop cycle and mixed with most types of fertilizers and plant protection products. Also, it does not affect the waxy layer of the leaves even after several applications and does not burn the leaves or cause foam.

Resistance

There are no reports of resistance to JABOLIM. However, it is good practice to use such products as components of Integrated Pest Management systems, alternating with other control measures. This is particularly important for sequential crops.
