

tebseme™

A flowable concentrate for seed treatment (FS) formulation intended for application to barley and wheat containing 25 g/L Tebuconazole.

**FOR USE ONLY AS AN AGRICULTURAL FUNGICIDE
THIS PRODUCT IS FOR PROFESSIONAL USE ONLY**

SAFETY INFORMATION

Toxic to aquatic life with long lasting effects

Do not eat, drink or smoke when using this product.

Wear protective gloves/ protective clothing.

Do not handle until all safety precautions have been read and understood.

If exposed or if you feel unwell: call a Poison Centre or doctor/physician

Collect spillage.

Dispose of contents/container to a licensed hazardous waste disposal contractor or collection site except for triple rinsed empty containers which can be disposed of as non-hazardous waste.

To avoid risks to human health and the environment, comply with the instructions for use.

Do not contaminate water with the product or its container. (Do not clean application equipment near surface water/Avoid contamination via drains from farmyards and roads).

PCS No: 05721

Precautions

If exposed or if you feel unwell seek medical advice immediately (show the label where possible).

No specific antidote is available. Treat symptomatically.

In case of accident, call the 24-hour National Poisons Information Centre:

Tel.: +353 (0)1 809 2566 or +353 (0) 1 837 9964.

READ THE LABEL CAREFULLY BEFORE USE

TEBSEME™ is a flowable concentrate formulation to be used as a systemic fungicide. TEBSEME™ is intended for use on wheat and barley for control of seed- and soil-borne diseases affecting cereals. The treatment of seeds with a proper dressing preparation is the first step aiming to improve plant health.

TEBSEME™ contains the active ingredient tebuconazole, a systemic fungicide with preventative and curative action. Tebuconazole (triazoles) acts on the membrane functions of the fungus and inhibits the biosynthesis of the sterol production by inhibition of 14- α demethylation.

TEBSEME™ preserves yield potential and prevents quality losses by avoiding the development of seed and soil-borne diseases.

IMPORTANT INFORMATION

Instructions for use:

FOR PROFESSIONAL USE ONLY AS AGRICULTURAL FUNGICIDE

Crop	Max. single dose	Max. no. of applications	Max. Total dose	Last time of application
Wheat	1.21 L/Ton	1 per crop	1.21 L/Ton	-
Barley	1.21 L/Ton	1 per crop	1.21 L/Ton	-

Specific diseases controlled:

Wheat: Common bunt (*Tilletia caries*), Fusarium (*Fusarium spp.*), Foot rot (*Monographella nivalis*)

Barley: Loose smut (*Ustilago nuda*), Barley Stripe (*Pyrenophora graminea*), Fusarium (*Fusarium spp.*), Foot rot (*Monographella nivalis*)

Water volume depending on the seed dresser type.

MAX 200 kg seed/ha

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.

Directions for use

IMPORTANT. This information is approved as part of the Product Label. All instructions within this section must be read carefully to obtain safe and successful use of this product.

Restrictions and precautions

Professional use only.

Method of application: Seed treatment equipment

The treated material may be used only for sowing. It must not be used for consumption or for animal feed.

The treated material should be coated thoroughly and evenly by the product.

Treat only well-cleaned seed. The treatment is recommended just before the sowing.

Seeds should be drilled within 1 month of treatment and should not be kept from one season to the next.

Do not treat sowing seed with a moisture content above 16% or treated previously with other substance.

Store the treated material in a cool, dry, well-ventilated warehouse.

In case it is necessary to store seed to the next season, the ability of germination should be tested before sowing.

Application recommendations

Follow strictly recommended individual dose rate.

Shake well before use.

Prepare the suspension in a seed treatment machine or in a separate container. Pour a measured quantity of water, add the appropriate quantity of seed treatment, carefully stirring. Stir continuously to avoid drying of the substance. Treat the seed only in seed treatment machine with continuous or periodic movement according to manual instruction.

Drilling

Seed treated with TEBSEME™ may affect the flow rate of seed through drills.

It is therefore important to check the calibration of the drill with TEBSEME™ treated seed before drilling commences.

Storage conditions

Store in secured places to avoid release of the product to the environment and protect against third party access.

Store in the original containers to prevent contact with food, drink and feed.

Store in tightly closed containers, in a cool, well ventilated area, at a temperature between 0°C – 25°C.

Cleaning and Disposal

All contaminated protective clothing should be washed/cleaned with water or a dilute detergent solution and thoroughly rinsed.

All application equipment should be triple rinsed with water. Care should be taken not to discharge the contaminated washings from application equipment into waste water channels. Waste water may be used to prepare a liquid solution during next treatment. Alternatively, contaminated cleaning liquids should be disposed using a technical solution to ensure the biological degradation of the active substance of plant protection product, or dispose in other ways in accordance with regional waste regulations.

The use of the emptied containers of the plant protection products for other purposes is forbidden.

Any unused product should be passed to the entity authorized to receive the hazardous substances. The empty containers should be returned to the seller of plant protection products or treated as waste.

In case of any doubt contact any seller of plant protection products for assistance.
