# **READ LABEL CAREFULLY BEFORE USE**

### **USE INSTRUCTIONS**

GRANPROTEC is an emulsifiable concentrate formulation to be used as an insecticide for the control of Sitophilus spp (S. granarius, S. oryzae), Sitotroga cerealella, Tribolium spp., Rhyzopertha dominica, Oryzaephilus surinamensis, Cryptolestes ferrugineus, Euphestia spp. and Corcyra cephalonica in stored cereals (with the exception of wheat). GRANPROTEC contains deltamethrin, a synthetic insecticide based structurally on natural pyrethrins, which affects the nervous system of insects by causing multiple damage in the nerve cells by delaying the closing of an ion channel. GRANPROTEC acts as contact poison through cuticular penetration or oral uptake, affecting the insect's nervous system. The susceptibility of insects is dependent on a variety of factors and can vary, as with many insecticides, according to the environmental conditions

Crop	Max. single dose	Max. no. of applications	Max. total dose	Latest time of application
Barley, Oats, Rye	12 ml/ton	1	12 ml/ton	Post-harvest at store/silo loading

### Please consult malster / miller before treating

Method of Application: specialised application equipment

### MIXING AND APPLICATION

Half fill the spray tank with water and add the required amount of GRANPROTEC, mixing well. Complete filling of the tank with water. The spray mix should be agitated continuously until application is complete.

Application using low-pressure nozzles situated over the conveying machinery, as near to the final storage place as possible.

All application equipment and contaminated protective clothing should be washed/cleaned with water or a dilute detergent solution and thoroughly rinsed. Care should be taken not to contaminate watercourses with the contaminated washings. Contaminated cleaning liquids should be disposed of safely according to local regulations.

Avoid spillage. In case of spill, remove contaminated clothes and wash skin immediately. Immediately after spraying, drain tank completely. Any contamination on the outside of the spraying equipment should be removed by washing with clean water. Rinse inside of tank with clean water and flush through booms and hoses using at least one-third of the spray tank volume. Half fill tank with clean water, agitate and drain tank completely. Repeat this step again.
