WA NING
Tak car to avoid local overdosing.

Do a make more than one application of KERB FLO within 9 months to the same area of land.

- KERB FLO can be used on all soil types with the following exceptions:
- 1. Do not use on soils containing more than 10% organic matter.
- 2. Do not use on strawberries or winter field beans grown in certain soil types. See Crop Recommendation tables.

SOIL TEXTURE (85 System)							
Textural Group	Textural class						
Sands	Coarse sand, sand, fine sand, loamy coarse sand						
Very Light Soils	Loamy sand, loamy fine sand, coarse sandy loam						
Light Soils	Sandy loam, fine sandy loam, sandy silt loam, silt loam (85)						
Medium Soils	Sandy clay loam, clay loam, silty clay loam						
Heavy Soils	Sandy clay, clay, silty clay						

PAGE 3

SOIL AND WEATHER CONDITIONS

KERB FLO requires moisture for root upta Best residual action is obtained in moist soils of fine tilth.

KERB FLO can be applied under frosty condit. s but should not be used where run-off from the soil surface is likely.

Best results are achieved where the of we. s. (especially black-grass and volunteer cereals) is slow, but transpiration continues. In mild au missiwith erged weeds may take longer to be controlled, the residual activity of KERB FLO will be inortened and overall control may be reduced. The efficiency of KERB F or may be reduced in organic soils and in the presence of excessive surface organic debris, burnt straw, ash, or roughed in our f.

In winter field beins ensuring seed d before spraying.

RESISTANCE

Strains of some are value asses (. g. black-grass, wild oats, Italia, avegrass, nave developed resistance to herbicides which lead to our oftrol. A strategy for previous and onlying such resistance should be adopted. Guidelin, have been reduced and are available from our language. Teagasc/ Independent advisor.

Ch. 'P IN: 'RMA: ION

Note: Societic application information for each one is continued in the Crop Recommendation Tables that follow. Societies a line in the Crop Recommendation Tables that follow.

WINT'R OILJEED RAPE

KERB LO can be applied after the use of a point graminicide applied in accordance with the manufacturer's recor hendations.

MESTRY, FOREST NURSE (OUTL OR WOODY ORNAMENTALS

KRB FLO is recom rended ruse on a following species: Alder, Beech, Southern Beech, Birch, Douglas Fir, Grand Fir, Noble Fir, Horse stnutarch, Lawson Cypress, Oak, Bishop Pine, Corsican Pine, Lodgepole Pine, Monterey Pine, Scots Pine, Popua, Torway Lace, Sycamore, Sitka Spruce, Western Hemlock, Wild Cherry.

KRBB FLO is recommended by the on the following species which have been planted out rule than the previous spring: Perberis darwinii, Buddleia davidii, Chamaecyparis spp (False Cypress), Cotoneaster spp, Crataegus

spp (H v. rns), Fagus sylvatica (Beech), Forsythia x intermedia, llex aquifolium (Holly), Larix decidua (Larch), Philade phus o (Mock Orange), Picea spp (Spruces), Pinus spp (Pines), Prunus gladulosa, Quercus spp (Oak), a spp (Rose including Rose rootstocks), Spiraea x burnalda 'Froebelii', Syringa vulgaris (Lilac), Taxus baccata (Ye), Thuja orientalis 'Rosedalis'.

Ker Flo may be used in the production of Christmas trees.

FR IT CFOPS

ecommendation Tables.

MISSELLANEOUS, INCLUDING LETTUCE

See Crop Recommendation Tables.

PROCESSED CROPS

No taints have been detected in tests with treated field crops. Consult your processor before use.

Winter oil seed rape, winter field beans, lucerne: Apply KERB FLO in 200 to 1000 litres of water per hectare.

Pome fruit, top and cane fruit [apple, blackcurrant, redcurrant, gooseberry, raspberry, loganberry, blackberry, pear, plum], forestry, forest nursery, outdoor woody ornamentals, Christmas trees, lettuce (outdoor), rhubarb (outdoor), strawberry (outdoor): Apply KERB FLO in 400 to 1000 litres of water per hectare.

Ensure good ground cover.

PAGE 4

APPLICATION EQUIPMENT

Do not apply through broadcast air-assist sprayers.

All crops: Application may be made through around crop sprayer.

Forestry, , forest nursery, outdoor woody orn rental, Christmas trees: KERB FLO may also be applied with a knapsack sprayer or the Micron Human and the contract of the Micron Human and the contract of the Micron Human and the contract of the contract of

knapsack sprayer or the Micron H. God.

Knapsack applications: Add alf the aguired amount of water to the knapsack. Shake the KERB FLO container vigorously and add the re-uired amount. The knapsack, agitate the knapsack until the KERB FLO is fully dispersed. Top up the knapsack of the rest of the wall and spray immediately, do not allow the mixture to stand.

Micro Herbi Applicatio. Fit the Micron Herbi with the orange nozzle and the 19 inch OD breather tube. Any other size could result unever plication of 375 ml KERB FLO to 625 of aler the spray bottle. Shake thoroughly to ensure all the valuet is a suspension. Then add 5 ml on approximate wetting agent and shake gently to ensure an even mixture.

to ensure all the more success signs. Then add 5 million alphronic diverting agent and shake gently to ensure an even mixture.

The Homicapplies 1.2 catre band. To apply the recommender rate of KERB FLO, the operator should cover 10 me. and provided in the proposal state of the program of the proposal state of the program of the progr

NO. ES FOR CROP RECOMMENTATION TABLES

1) Chickweed control may be reduced where it is well established (over 10 cm in diameter)

b) CONTROL OF BLACKGRASS IN WINTER OILSEED RAPE:

Established (well-tillered) black-grass is moderately susceptible: Where populations of black-grass and/or volunteer cereals exceed 50/m² KERB FLO should be applied in a tank mix with an approved graminicide in accordance with the manufacturers recommendations, or following an effective approved graminicide to ensure optimum weed control. Deeper germinating black-grass within the soil profile could reduce product efficacy.

Where partial resistance (R* or RR*) to the partner graminicide is known to exist the dose of KERB FLO may

white partial resistance (N° of Nn°) to the partiest granilinitude is known to exist the dose of Arch FLO may be increased to 2.1 litres/ha. This may also be done if applications are made early in the season, under warm conditions and an increase in the duration of residual control is required (see Soil and Weather Conditions above). Where high levels of resistance (RRRs) to the partner graminicide occurs there is no advantage of adding this graminicide to KERB FLO for black-grass control, and KERB FLO even at 2.1 litres/ha will not give acceptable levels of established black-grass control in these circumstances. R = 1* RR = 2*/3* RRR = 4*/5*

c) For heavy infestation of common couch a repeat application may be required the following winter. Avoid deep burying of rhizomes when preparing land prior to KERB FLO treatment.

PAGE 8

FOLLOWING CROPS

The number of weeks which must elapse betwee the last application of KERB FLO and drilling or planting of the following crop is shown

Following crops	Rate of KERB applied to	Date KERB FLO applied to previous crop
