A soluble concentrate containing 100 g/litre (9.0% w/w) clopyralid as the monoethanolamine salt. A foliar acting herbicide effective against a range of perennial and annual weeds, in particular THISTLES and MAYWEEDS, in a variety of crops.

**RISK AND SAFETY INFORMATION**

**WARNING**

**VERY TOXIC TO AQUATIC LIFE WITH LONG LASTING EFFECTS.**

Keep out of reach of children. Avoid breathing vapours. Do not eat, drink or smoke when using this product. Use only outdoors or in a well-ventilated area. Avoid release to the environment. Collect spillage. Dispose of contents/container to a licensed hazardous-waste disposal contractor or collection site except for triple rinsed empty containers which can be disposed of as non-hazardous waste.

To avoid risks to human health and the environment, comply with the instructions for use.

**FOR PROFESSIONAL USE ONLY**

**TRIPLE RINSE CONTAINERS, PUNCTURE AND INVERT TO DRY AT TIME OF USE**

**PROTECT FROM FROST.**

**READ DIRECTIONS FOR USE ON ATTACHED LEAFLET.**

PCS No. 04899
SAFETY PRECAUTIONS

Operator protection:
WASH HANDS AND EXPOSED SKIN before meals and after work.

Environmental protection:
Extreme care must be taken to avoid spray drift onto non-crop plants outside the target area.
KEEP LIVESTOCK OUT of treated areas for at least 7 days and until foliage of any poisonous weeds such as ragwort has died and become unpalatable.
Do not contaminate water with the product or its container. Do not clean application equipment near surface water. Avoid contamination via drains from yards and roads.

Storage and disposal:
KEEP IN ORIGINAL CONTAINER, tightly closed, in a safe place.
WASH OUT CONTAINER THOROUGHLY, empty washings into spray tank and dispose of safely.

DIRECTIONS FOR USE

IMPORTANT INFORMATION.
FOR USE ONLY AS AN AGRICULTURAL/HORTICULTURAL HERBICIDE

Situation: Sugar beet, red beet, fodder beet, mangels, swede, turnip, winter and spring oilseed rape, linseed, Brussels sprout, cabbage, broccoli/calabrese, cauliflower, bulb onion, forage maize, grassland, ornamental plant production.

Maximum Individual Dose:

Maximum Total Dose:

Latest Time of Application:

Full details are given in the Important Information area on the attached leaflet. Read the label before use. Using this product in a manner that is inconsistent with the label may be an offence. Follow the code of practice for using plant protection products.

DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

GENERAL WARNING

ALL CROPS
Do not use any plant material treated with CLIOPHAR 100 for composting or mulching.
Do not use manure from animals fed on crops treated with CLIOPHAR 100 for composting.

ALL CROPS (EXCLUDING LINSEED)

LINSEED STRAW:
Straw from linseed sprayed with CLIOPHAR 100 may contain residues which could damage certain crops. To avoid such risk:
Bale and cart away the linseed straw. Where linseed straw is chopped and incorporated do not plant winter beans in the same year as treatment with CLIOPHAR 100.
NOTES
For best results apply CLIOPHAR 100 when the weeds are actively growing. Control of mayweeds may be reduced if they are suffering from drought stress at the time of application.
Control of creeping thistle and other perennial weeds may be impaired by cultivations either before or within a period of two weeks after application of CLIOPHAR 100.
In common with good spraying practice CLIOPHAR 100 should not be applied when the crop is damp or when rainfall is expected within six hours.
Do not spray when crops are under stress from cold, drought, pest damage, nutrient deficiency etc.
Consult processors before using on crops grown for seed.
Do not apply to crops undersown with clover or other legume containing mixtures.
CLIOPHAR 100 is not subject to vapour drift, but do not spray in windy weather and avoid drift onto susceptible crops (e.g. seed potatoes).
Take care to avoid drift onto crops and non-target plants outside the target area.
Wash spraying equipment thoroughly with water and a liquid detergent immediately after use. Spray out. Fill with clean water and leave overnight. Spray out again before storing or using another product, particularly where changing over from herbicides to insecticides. Traces of CLIOPHAR 100 can cause harm to susceptible crops (e.g. seed potatoes) sprayed later.
CLIOPHAR 100 should be applied in tank mix with other products only if any requirement or restrictions on the other product label do not conflict with the requirements or restrictions of CLIOPHAR 100. Tank mixes should not be allowed to stand in the tank and agitation should be maintained at all times.
MIXING
Fill the spray tank half full with water and add the required amount of CLIOPHAR 100 mixing well, then complete filling. If using a tank mix the other products should be mixed with the water first following the label instructions, and CLIOPHAR 100 added last. The spray mix must be agitated continuously until application is complete.
SPRAY QUALITY
Apply CLIOPHAR 100 as a MEDIUM spray as defined by the BCPC system.

ANNUAL WEED SUSCEPTIBILITY TO CLIOPHAR 100
Weed susceptibility to the most commonly recommended rates of CLIOPHAR 100 are given in the weed tables below. For further details of fieldings, etc. please refer to the individual crop sections.

| Weed                | Growth Stage | Susceptible: Good kill | | Moderately Susceptible: Moderate kill, strong suppression of survivors | | Moderately Resistant: Poor kill but useful suppression |
|---------------------|--------------|------------------------|--------------------------|---------------------------------|---------------------------------|
| Corn marigold       | 2 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          | Pale persicaria                 |
| Groundsel           | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          | Redshank                        |
| Pineappleweed       | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |
| Scented mayweed     | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |
| Scentless mayweed   | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |
| Smooth sow-thistle  | 2 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |

Please refer to individual crop sections for recommended rates for the control of creeping thistle.

PERENNIAL WEED SUSCEPTIBILITY TO CLIOPHAR 100
Control by 1.0 litre/ha + 2.0 litres/ha programme.
Creeping thistle S
Perennial sow-thistle MS
Dandelion S
Spear thistle S
White clover (10 cm diameter) MS
S = Susceptible; Complete or near complete kill
MS = Moderately Susceptible; Good kill under favourable conditions

CLIOPHAR 100 applied in the 1.0 litre/ha + 2.0 litres/ha programme will also give some suppression of young plants of amphibious bistort and colt’s-foot.

SUGAR BEET, RED BEET, FODDER BEET AND MANGELS

CONVENTIONAL VOLUMES
For the control of annual weeds apply 1.0 litre in 200 to 250 litres of water per hectare. For the control of creeping thistle apply 1.0 litre in 200 to 250 litres of water per hectare at the rosette stage, followed by a second application of 2.0 litres in 200 to 250 litres of water per hectare three to four weeks later.

Use Alone
CLIOPHAR 100 may be applied from the fully expanded cotyledon stage of the crop.

Compatibility
CLIOPHAR 100 at 1 litre/ha is compatible with the following products at the rate recommended by the manufacturers.

| Weed                | Growth Stage | Susceptible: Good kill | | Moderately Susceptible: Moderate kill, strong suppression of survivors | | Moderately Resistant: Poor kill but useful suppression |
|---------------------|--------------|------------------------|--------------------------|---------------------------------|---------------------------------|
| Corn marigold       | 2 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          | Pale persicaria                 |
| Groundsel           | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          | Redshank                        |
| Pineappleweed       | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |
| Scented mayweed     | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |
| Scentless mayweed   | 4 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |
| Smooth sow-thistle  | 2 leaf       | 1 litre/ha             | 2 litre/ha               | 1 leaf                          |                                 |

Please refer to individual crop sections for recommended rates for the control of creeping thistle.

LOW DOSE PROGRAMME

Compatibility
CLIOPHAR 100 at 1.0 litre in 80 to 100 litres of water per hectare may be applied as part of the sequential low dose programme with the following products.

Approved formulation of metamitron 70% w/w + Newman Crop Spray 11E
First true leaves 10 mm long
Improves control of thistles and black-bindweed

WINTER AND SPRING OILSEED RAPE

AUTUMN SOWN OILSEED RAPE

CLIOPHAR 100 can be applied once at any stage of the programme with the other herbicides provided the products are used according to manufacturers’ instructions. To complete control of creeping thistle a second application of CLIOPHAR 100 alone at 2.0 litres/ha in 200 to 250 litres of water per hectare should be made 3 to 4 weeks later.

WINTER AND SPRING OILSEED RAPE

CLIOPHAR 100 can be applied to all varieties of autumn sown oilseed rape in the spring from the two fully expanded leaf stage but before the flower buds are visible above the crop canopy.

Perennial Weed Control
For the control of creeping thistle apply CLIOPHAR 100 at 2.0 litres in 200 to 250 litres of water per hectare at the weed rosette stage (up to 30 cm across).

**Annual Weed Control**

For annual weeds apply CLIOPHAR 100 at 1.0 litre/ha in the spring. In competitive crops of oilseed rape may weeds up to 10 cm in diameter will be well controlled by CLIOPHAR 100 at 1.0 litre/ha. Apply in a water volume of 200-400 litres/ha.

**SPRING SOWN OILSEED RAPE**

CLIOPHAR 100 can be applied to all varieties of spring sown oilseed rape for the control of annual weeds or creeping thistle. For annual weeds apply CLIOPHAR 100 at 1.0 litre in 200 to 250 litres of water per hectare. For creeping thistle apply CLIOPHAR 100 at 1.0 litre/ha at the rosette stage followed by a second application three to four weeks later of 2.0 litres in 200 to 250 litres of water per hectare.

**BRASSICA CROPS**

CLIOPHAR 100 may be applied to all types and varieties of cabbage, broccoli, calabrese, Brussels sprouts, cauliflower, swede and turnip in the spring. For the control of annual weeds apply CLIOPHAR 100 at 1.0 litre in 200 to 250 litres of water per hectare.

For the control of creeping thistle apply CLIOPHAR 100 at 1.0 litre/ha for the first application at the rosette stage, followed by a second application three to four weeks later of 2.0 litres in 200 to 250 litres of water per hectare. Application should only be made to direct drilled brassica crops after they have reached the two true leaf expanded stage. Transplanted crops can be treated once they are growing strongly and are fully established. Some chlorosis or leaf distortion may occur in crops with a reduced coating of leaf wax (eg due to soil acidity).

Compatibility

CLIOPHAR 100 when used at 2.0 litres/ha should not be tank mixed for use on any brassica crop.

Do not use CLIOPHAR 100 in any tank mixture on early varieties of F1 hybrid Brussels sprouts.

**ONIONS**

CLIOPHAR 100 may be applied to spring or autumn sown bulb onions in the spring. For annual weeds apply 1.0 litre in 200 to 250 litres of water per hectare. For the control of creeping thistle apply CLIOPHAR 100 at 1.0 litre/ha for the first application followed by a second application three to four weeks later of 2.0 litres/ha in 200 to 250 litres of water per hectare.

CLIOPHAR 100 should only be applied to onions after they have reached the two true leaf stage. Extreme caution must be taken when applying CLIOPHAR 100 to onions particularly at the higher rate. The possibility of crop effects (chlorosis, leaf distortion and/or leaf prostration) will be reduced by observing the following:

- CLIOPHAR 100 should only be applied to onions which have an adequate wax layer.
- Certain conditions will reduce the layer of protective wax; these include previous chemical applications, drought stress, periods of low light/high day temperatures or rapid growth caused by high nitrogen regimes and irrigation, etc.

Do not apply CLIOPHAR 100 to onions at temperatures above 20°C or when under stress.

**FORAGE MAIZE**

CLIOPHAR 400 can be applied to all varieties of forage maize after the three leaf expanded stage. For annual weeds apply 1.0 litre in 200 to 250 litres of water per hectare.

**ESTABLISHED GRASSLAND**

CLIOPHAR 100 can be applied to all species and varieties of grass in established leys or permanent pastures following removal of any livestock.

Do not use on newly sown lays.

**Do not use on amenity grassland.**

As an overall treatment, CLIOPHAR 100 should be applied at 2.0 litres/ha in a water volume of 300 to 400 litres/ha.

Application should be made when weeds are actively growing at the 15 to 30 cm rosette stage. If grass has been cut for hay or silage, treat at least 2 to 3 weeks after cutting when sufficient regrowth has occurred.

**NOTE:**

A 7 day period must elapse between the application of CLIOPHAR 100 and the reintroduction of livestock, or the cutting for hay or silage.

**LINSEED FOR OIL**

CLIOPHAR 100 can be applied to all varieties of linseed in the spring from the two leaf expanded stage but before the flower buds are visible. For the control of annual weeds apply 1.0 litre in 200 to 250 litres of water per hectare.

**OUTDOOR WOODY ORNAMENTAL PLANT PRODUCTION**

CLIOPHAR 100 can be applied as a directed spray on ornamental trees and shrubs, but all spray or drift contact with leaves, buds, suckers, or green stems of the crop must be avoided using a shielded or hooded sprayer if necessary.

Do not apply CLIOPHAR 100 within the root zone of species of the family Compositae (eg Senecio spp) or Papilionaceae (eg Laburnum, Genista, Cytisus spp). Application should be made when weeds are actively growing at the 15 to 30 cm rosette stage.
