SAFETY PRECAUTIONS

Operator protection:
- Engineering control of operator exposure must be used where reasonably practicable in addition to the following personal protective equipment:
  - Wear suitable protective clothing (coveralls), suitable protective gloves and face protection (faceshield) when handling the concentrate
  - Wear suitable protective gloves when handling contaminated surfaces
  - Wear suitable protective clothing (coveralls) and suitable protective gloves when applying by hand-held equipment

DO NOT BREATHE SPRAY. WHEN USING DO NOT EAT, DRINK OR SMOKE.
WASH CONCENTRATE from skin and eyes immediately.
WASH HANDS AND EXPOSED SKIN before eating and drinking, and after work.

Environmental protection:
- DO NOT CONTAMINATE WATER with the product or its container. Do not clean application equipment near surface water. Avoid contamination via drains from yards and roads.

Extreme care must be taken to avoid spray drift onto non-crop plants outside of the target area.

To protect aquatic organisms respect an unsprayed buffer zone of 5m to surface water bodies
Livestock must be kept out of treated areas. IF RAGWORT IS PRESENT, FOLLOW THE GUIDANCE IN THE ‘DIRECTIONS FOR USE’

Storage and disposal:
- KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDINGSTUFF.
- KEEP IN ORIGINAL CONTAINER, tightly closed in a safe place.
- RINSE CONTAINER THOROUGHLY by using an integrated pressure rinsing device or manually rinsing three times. Add washings to sprayer at time of filling and dispose of safely.
- DO NOT RE-USE CONTAINER for any purpose.

A suspension emulsion formulation containing 100 g/litre fluroxypyr and 2.5 g/litre florasulam.

A post-emergence herbicide for use on GRASS SEED CROPS, NEWLY SOWN LEYS and ESTABLISHED GRASSLAND for the control of DAISY, DANDELION, BUTTERCUP and other broad-leaved weeds.
IMPORTANT DECISIONS

- Do not spray when grass is wet.
- Do not spray during or immediately after rainfall of grass.
- Do not spray within 7 days of cutting or before harvest of crops.
- Do not apply directly to, or allow spray drift to come into contact with agricultural crops or pasture grass.
- Do not apply to, or allow spray drift to come into contact with aquatic plants growing in or on water courses.

GENERAL INFORMATION

ENVY contains active ingredients with differing modes of action and the risk of resistance building is therefore reduced. However as florasulam is an ALS herbicide, it is essential that a rotation of other non-ALS herbicides is adopted. A combination of different herbicides with different modes of action is an essential step in the prevention of resistance. Care should be taken to ensure the tank is complete. Where possible, additional weed control is achieved by selecting appropriate herbicides and herbicide mixtures.

RATE OF APPLICATION AND WEEDS CONTROLLED

- Application timing is crucial for good control. Applications must be made to weeds that are actively growing before and immediately after application.
- Application rates depend on the weed to be controlled and the stage of growth of the crop at the time of spraying.
- Environmental conditions such as temperature, humidity, wind speed, and sun exposure can significantly affect the effectiveness of the herbicide.

APPLICATION TYPING

Refillable equipment should be used and refilled after each application; the grout tank must be drained at the end of each day and prior to leaving the field over a number of years. Users are advised to apply products containing a tank mix, therefore, avoid using herbicides with different modes of action or use sequences or tank mixtures.

TANK CLEANING

1. Immediately after spraying, drain tank completely. Any contamination on the outside of the spraying equipment should be removed by brushing, scraping, or scrubbing before it is allowed to dry.
2. Rinse inside of tank with clean water and flush through booms and hoses with the cleaning solution. Top up with water making sure the tank is completely filled and allow to circulate for at least 5 minutes before flushing through booms and hoses and draining tank completely.
3. Rinse booms and hoses with the cleaning solution. Top up with water making sure the tank is completely filled and allow to circulate for at least 5 minutes before flushing through booms and hoses and draining tank completely.
4. Rinse booms and hoses with the cleaning solution. Top up with water making sure the tank is completely filled and allow to circulate for at least 5 minutes before flushing through booms and hoses and draining tank completely.
5. Rinse the tank with clean water and flush through the booms and hoses and drain tank completely.

ENVY may be applied through tractor-mounted hydraulic sprayers providing they are in good working order and have been calibrated according as to the quality and fitness for any purpose of our goods are less than perfect and any errors or omissions in performance, damage or injury whatsoever arising from their storage, handling, mixing or use, otherwise, as to the quality or fitness for any purpose of our goods are excluded whether or not they supervise or assist in the use of such goods.

For your DOW Farm Direct Tariff on the outside of the spraying equipment should be removed by brushing, scraping, or scrubbing before it is allowed to dry.
