INTRODUCTION

This book contains the list of plant protection products that may be placed on the market and used in accordance with the European Communities (Authorization, Placing on the Market, Use and Control of Plant Protection Products) Regulations 2003 ¹ The products listed are those that on 1 January 2004, had been registered, i.e. had been authorized, cleared, notified or granted permission to market, in accordance with the Regulations. The list also includes products for which a parallel import approval has been issued.

Legislation has been introduced to regulate Biocides, including wood preservatives, rodenticides, antifouling paints, disinfectants and other such products. Pending the compilation of the Official register of Biocidal products the listing of products included in this book is confined to plant protection products.

A brief outline of the new regulatory system for biocidal products may be found on page *vii*.

Chapter 1 contains an alphabetical listing of the plant protection products registered on 1 January 2004. For each product, the following information is provided -

- ◆ its authorization, clearance, notification or permission to market number,
- ◆ the holder of the authorization, clearance, notification or permission to market,
- ◆ the marketing company
- ◆ the function of the product (*e.g.* herbicide, fungicide *etc.*),
- ◆ the formulation type (*e.g.* WP – wettable powder, EC – emulsifiable concentrate),
- ◆ the identity and content of each active substance in the product

Chapter 2 contains a list of the plant protection products for which a name change was accepted during 2003. Both the former and current names are provided.

Chapter 3 contains a list of the plant protection products for which authorization, clearance, notification or permission to market, as appropriate, has expired or has been rescinded during 2003.

Chapter 4 contains a list of some plant protection products for which authorization, clearance, notification or permission to market, as appropriate, will be rescinded during 2004. The list contains the date of revocation of the registration and the date from which the use of the product will be illegal. Stocks of any of these products at wholesale or retail level after the registration revocation date or at user level after the use by date must be disposed of in an appropriate manner.

Chapter 5 contains a list of active substances prohibited for marketing and use for plant protection in accordance with the European Communities (Prohibition of Certain Active Substances in Plant Protection Products) Regulations, 1981 to 1990 ², and the Poisons (Prohibition of the Use of Certain Substances for Agricultural Purposes) Regulations, 1991 ³.

Chapter 6 contains a list of Active Substances that have been included in Annex I of 91/414/EC as at 10/2/04.

Chapter 7 contains a list of Active Substances that have been refused inclusion in Annex I of 91/414/EC as at 10/2/04.

The list of companies holding authorization, clearance, notification or permission to market for products listed in this book or that are responsible for the marketing of those products, together with their addresses, and, where available, telephone and tele-facsimile numbers are provided in Chapter 8.

Chapter 9 consists of an index of all products on the market on 2 January 2004, arranged by active substance.

Chapter 10 consists of an alphabetical list of adjuvants that on 2 January 2004 were included on the product register.

LEGISLATION

Current statutory provisions ⁴ require that prior to their marketing and use, plant protection products (PPP's) are authorized to ensure a high level of protection for humans, for animals and for the environment. The health of those handling PPPs as well as that of consumers, depend on their being used in accordance with label instructions, which, where relevant, include precautions to prevent damage to health or to the environment. In the case of plant protection products evaluated since 1 October 1994, their effectiveness and safety to crops is also evaluated as part of the authorization process.

PPPs offered for sale are inspected at both wholesale and retail distribution levels, to ensure that they have been authorized, notified or granted a permission to market, in accordance with the legislation and to ensure that they are correctly packaged and labelled. In addition PPPs are sampled for subsequent analysis, to ensure that the products sold or supplied conform with the specification of the product authorized, notified or granted permission to market.

Agricultural produce offered for sale is routinely sampled and analyzed for its pesticide residue content. Produce found to contain residues exceeding Maximum Residue Levels (MRLs) may be destroyed at the owner's expense and without payment of compensation. In accordance with the relevant statutory provisions ⁵, offenders are liable to imprisonment, to being fined or to both. The presence of excessive residues is indicative of misuse of the PPPs

Products of plant origin including fruit and vegetables: S.I. No. 179 of 1999, S.I. No. 458 of 1999, S.I. No. 461 of 2000, S.I. No. 462 of 2000, S.I. No. 139 of 2001, S.I.No.256 of 2001, S.I. No. 621 of 2001, S.I. No. 535 of 2002, S.I. No. 271 of 2003, S.I. No. 384 of 2003

concerned. The immediate and long term health risks for consumers exposed to such residues are well established.

It should be noted that although the authorization system in place for plant protection products includes the consideration of the performance of products, in terms of their effectiveness and safety to crops, such evaluations have only been completed for plant protection products authorized since 1 October 1994. Notified and cleared plant protection products, or those granted a permission to market, at an earlier date have not been checked, by the Pesticide Control Service of the Department of Agriculture and Food with regard to their effectiveness for the purpose intended.

Users of plant protection products, are reminded that label instructions concerning the handling of PPPs and the use of protective clothing and equipment, must be carefully followed to avoid damage to the health of those concerned with their use. The adherence to label instructions concerning rates and timing of applications is essential to ensure that consumers are not at risk from the presence of excessive residues in treated crops. It is especially important that the prescribed intervals between last application and harvest be observed. Strict adherence to label instructions relating to method and manner of use and relating to the disposal of packaging is necessary to avoid contamination of the environment and to prevent damage to wildlife.

The use of plant protection products in a manner other than that provided for on product labels is an offence that is subject to prosecution.

Only PPPs included in the formal register maintained by the Pesticide Control Service of the Department of Agriculture and Food may be sold. However stocks of PPPs for which the relevant authorization, clearance, notification or permission to market has been recently withdrawn may still be available in some retail outlets. Retail distributors are advised to dispose of such stocks as soon as possible either through sale or safe disposal.

Information on Biocidal Products

Explanatory note:

The European Union introduced a Directive {European Parliament and Council Directive 98/8/EC} to control the placing on the market and use of biocidal products in the European Union. The objective of the Directive is to ensure that all biocidal products will be rigorously evaluated prior to being offered for sale to ensure that when used they are safe for man, animals and the environment.

A biocide is **defined** as any “active substances and preparations containing one or more active substances, put up in the form in which they are supplied to the user, intended to destroy, deter, render harmless, prevent the action of, or otherwise exert a controlling effect on any harmful organism by chemical or biological means.”

Implementation of the legislation.

The Pesticide Control Service of the Department of Agriculture and Food was designated, in July 2001, as the competent authority for the implementation of the legislation. Directive 98/8/EC has been transposed into Irish law by Statutory Instrument S.I. No. 625 of 2001 - European Communities (Authorization, Placing on the Market, Use and Control of Biocidal Products) Regulations, 2001.

The first step taken to implement the legislation was the initiation of a programme to identify those biocidal products being sold on the Irish Market. That involved the “Notification” of information to the Pesticide Control Service (PCS) and commenced in early 2002. The notification procedure will allow the PCS to compile all the relevant technical information necessary to identify biocidal products. When the notification process has been completed, a register of biocide products notified for marketing and use in Ireland will be compiled.

It is the responsibility of any company that markets a biocidal product to ensure that all of the data required as part of the notification process is submitted to the Pesticide Control Service, either by themselves or by another company acting on their behalf.

Information submitted to the PCS as part of the notification process should be addressed to the

SEARCH options on PCS website at -
www.pcs.agriculture.gov.ie

Three different search options are provided (it may take a few seconds for the search screen to load).

Search by Product Name – the drop-down box contains a list of all the plant protection products currently registered with PCS. Use the Scroll Button to move down through the list, which is in alphabetical order. You can type the first letter of a name into the drop-down box to move quickly to items that have names beginning with that letter. Clicking the “Find Product” button on the right will give details of the product that is currently in the drop-down box.

Search by Active Substance – the drop-down box contains a list of the active substances in currently registered products. Clicking the “List Products” button will give a list of the products that contain the active substance currently in the drop-down box. It should be noted that the products listed may also contain other active substances.

List Products

Search by Function/Crop – three sub-options are provided; click on the radio button above the drop-down box to choose the option you require. Clicking the “List Products” button will give a list of the products associated with the selected Function and/or Crop e.g. if the “Search by Function AND Crop” radio button is selected and the “Function Box” contains ‘Fungicide’ and the “Crop” box contains ‘Barley – spring’ then a list of all fungicide products for spring barley is produced. If the “Search by Function only” button were selected, a list of all registered fungicide products would be produced. If the “Search by Crop only” radio button were selected, a list of all products that can be used on spring barley would be produced.
