

Glyphos® Daxar

A foliar-applied herbicide for the control of most annual and perennial grasses and broad-leaved weeds
A water-soluble granule containing 68% w/w glyphosate

Product Registration No. MAPP 13054 / PCS 02966

HERBICIDE

A foliar applied herbicide for the control of most annual and perennial grasses and broad-leaved weeds. This product is water-soluble granule containing 68% w/w glyphosate. The EC50% Control of Substances Hazardous to Health Regulations may apply to the use of this product at work in the UK.

IMPORTANT INFORMATION
Glyphosate 02/50
Safety data sheet available on request.
Do not contaminate water with the product or its container. Do not drain application equipment into surface water/broad contamination (or drains from farmyards and roads).
To avoid risks to human health and the environment, comply with the instructions of use.
Dispose of contents (container to a licensed hazardous waste disposal contractor or collection site) and wash containers thoroughly before reuse. Do not reuse containers for non-hazardous waste.

FOR USE ONLY AS AN AGRICULTURAL / HORTICULTURAL / AQUATIC HERBICIDE

Crop	Maximum application rate (g/ha)	Maximum number of applications	Restrictions on use
Wheat, barley, oats, combining peas and field beans	4.0	1 per crop	Do not apply to crops in flower
Oilseed rape and linseed	4.0	1 per crop	Do not apply to crops in flower
Wheat, barley, oats, oilseed rape, combining peas, field beans, linseed, sugar beet, vetch, lupin, field vetch and lucerne	0.75	1 per crop	Pre-emergence
All arable crops (including all non-arable crops before planting)	4.0	1 per year	Do not apply to crops in flower
Greenhouses and glasshouses	0.0	1 per year	Do not apply to crops in flower
Crop cover on land not being used for crop production	0.0	-	-
Apple and pear orchards	0.5	1 per year	After harvest (Do not apply to crops in flower)
Cherry, damson and plum	0.5	1 per year	After harvest (Do not apply to crops in flower)
Exposed waters, land immediately adjacent to water	0.0	-	See other specific restrictions

READ THE LABEL CAREFULLY BEFORE USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL AND BE AN OFFICER. FOLLOW THE CODE OF PRACTICE FOR PLANT PROTECTION PRODUCTS.
Product Registration No. MAPP 13054 / PCS 02966

SAFETY PRECAUTIONS

Operator Protection (OP Only)
Engineering control of operator exposure must be used where reasonably practicable in addition to the following measures:
WEAR SUITABLE PROTECTIVE GLOVES when handling the granules and when handling contaminated surfaces.
WEAR SUITABLE PROTECTIVE CLOTHING COVERSALS, SUITABLE PROTECTIVE SLIPPERS AND RUBBER BOOTS when using hand-held sprayers, hand-held rotary devices, weed wiper equipment or spot-sprayer equipment.
Weathering equipment controls may reduce personal protective equipment of a Cab/enclosure system they provide an equal or higher standard of protection.

Storage and Disposal
KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDSTUFFS.
KEEP IN ORIGINAL CONTAINER TIGHTLY CLOSED, IN A SAFE PLACE.
KEEP OUT OF REACH OF CHILDREN.
EMPTY CONTAINER COMPLETELY and dispose of safely.

Other Specific Restrictions
When applying through spray nozzles, the spray droplet spectrum must be of a minimum Volume Median Diameter (VMD) of 500 microns.
Weed wiper may be used in any recommended crop where the chemical does not touch the growing crop. The maximum concentration used must not exceed the following:
Weed wiper 'wet' - 10g, 5-3 litres dilution with water
Weed wiper 'dry' - 3-5 litres dilution with water

DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully to obtain safe and successful use of this product.

General Information
Glyphos® Daxar is an effective herbicide when used as directed against most annual and perennial grasses and broad-leaved weeds.
Glyphos® Daxar is translocated from the treated leaves throughout the plant and to underground roots, stems and tubers. Symptoms such as gradual wilting and yellowing of foliage are rapidly visible in grass weeds but are slower to appear in broad-leaved weeds.
Cultivation and tillage can take place 4 hours after application to control annual broad-leaved weeds, 24 hours after treating annual grasses and 4 days after spraying perennial weeds. If direct drilling is practised 4 hours after application only annual weeds should be present. Allow minimum 7 days if weather conditions are not favourable and before planting of trees, ornamentals, vegetables etc.

Restrictions
Weather Conditions
Do not apply in a rain-free period of 4 hours (and preferably 24 hours) to avoid after application of Glyphos® Daxar.
Cultural practices should be taken to avoid spray drift as this can severely damage or destroy neighbouring crops or plants.
Glyphos® Daxar will be active in calm weather. It should not be used under frosty conditions when weed growth is reduced by natural senescence.
Tending weeds which are suffering from drought stress may result in reduced efficacy.

Following Crops
Glyphos® Daxar is translocated on contact with soil by binding to soil particles. All crops may be planted or sown at the intervals specified in 'Conditions of Use' following treatment. A rapid growth restriction following application may be seen if seeds are sown by direct drilled emerged emerging vegetation, trees, shrubs or other plants.

Warnings
DO NOT STORE, MIX OR APPLY THIS PRODUCT FROM AN UNLINED OR GALVANISED STEEL TANK.
DO NOT leave residues in spray tanks over long periods. Ensure that spray tanks are always thoroughly emptied.
Apply this product carefully. Ensure spraying takes place only when weeds are actively growing (normally March to October) and is confined only to visible weeds including those in the green sward covering the field and road verges - do not spray any trees.

Associated farming practices
Lime, fertilisers or other pesticides should not be applied for at least 3 days after the application of Glyphos® Daxar.
Weed control
It is important when treating perennial weeds that there is full emergence of healthy green foliage and active growth at the time of application.
The efficacy of this product is increased if the leaf surface for absorption is large. Common couch grass is most susceptible to treatment at the 10-15 cm stage, where there is about 10-15 cm of new growth, when flowering and new tillers are starting.
Glyphos® Daxar is particularly susceptible to treatment when they are actively growing and shortly before flowering.

Glyphos® Daxar is particularly susceptible to treatment when they are actively growing and shortly before flowering. Glyphos® Daxar is particularly susceptible to treatment when they are actively growing and shortly before flowering. Glyphos® Daxar is particularly susceptible to treatment when they are actively growing and shortly before flowering. Glyphos® Daxar is particularly susceptible to treatment when they are actively growing and shortly before flowering.

Stems of some annual weeds, (e.g. black grass, wild oats, and Italian ryegrass) have developed resistance to herbicides which spray and/or contact. A strategy for preventing and managing such resistance should be adopted. This should include integrating herbicides with a programme of cultural control measures. Guidance has been provided by the Weed Resistance Action Group and copies are available from the HGCA, CRU, your distributor, AgriPartner or product manufacturer.
Do not use glyphosate repeatedly over several years in the same field as selection of resistant biotypes can take place and may become prevalent.
No extra surfactant should be added if the product is to be applied using a rotary/boom sprayer.

CROPS

Glyphos® Daxar may be applied to any crop which is in flower with full and leafy crops, (perennial to annual) and sown in any crop which is in flower. Glyphos® Daxar may be applied to any crop which is in flower with full and leafy crops, (perennial to annual) and sown in any crop which is in flower. Glyphos® Daxar may be applied to any crop which is in flower with full and leafy crops, (perennial to annual) and sown in any crop which is in flower.

ARABLE APPLICATION
Pre-harvest, suitable for all crops and broad-leaved weeds.

Crop	Target weeds	Extent of weed control	Application rate (g/ha)	Water Volume	Application
Pre-harvest (all crops)	Annual and perennial grasses, broad-leaved weeds	Control of all weeds	4.0	Hydraulic sprayers 20-250 l/ha or rotary devices at 40 l/ha*	Apply when the maximum extent of the crop is in flower. Do not apply to crops in flower. Do not apply to crops in flower. Do not apply to crops in flower.
Pre-harvest (all crops)	Annual and perennial grasses, broad-leaved weeds	Control of all weeds	1.5	Hydraulic sprayers 20-250 l/ha or rotary devices at 40 l/ha*	Apply when the maximum extent of the crop is in flower. Do not apply to crops in flower. Do not apply to crops in flower. Do not apply to crops in flower.
Pre-harvest (all crops)	Annual and perennial grasses, broad-leaved weeds	Control of all weeds	2.0	Hydraulic sprayers 20-250 l/ha or rotary devices at 40 l/ha*	Apply when the maximum extent of the crop is in flower. Do not apply to crops in flower. Do not apply to crops in flower. Do not apply to crops in flower.

Spray application techniques and equipment
Glyphos® Daxar is a water-soluble granule formulation with fine flowing dust free granules that disperse readily in water. Application techniques include tractor-mounted sprayers, backpack sprayers, rotary distributors and specialised spraying equipment such as weed wiper applicators, where indicated.

Hydraulic sprayers mounted on tractors
