There is limited evidence of crop safety and/or product efficacy available for this extension of authorisation for minor uses and the commercial risk of using this product on the crops/situations listed in this document is borne entirely by the grower.

Other specific restrictions:

- (1) To avoid risks to human health & the environment comply with the terms of this approval in conjunction with the directions for use on the product label.
- (2) For any individual crop the maximum total dose refers to the total dose of any product containing the same active ingredient.
- (3) Dangerous to bees. To protect bees and other pollinating insects do not apply to crop plants when in flower or when flowering weeds are present. Do not apply when bees are actively foraging.
- (4) Application may only be made using a tractor mounted/trailed hydraulic sprayer.
- (5) Post application no unprotected person should enter the treated area until the application had dried & the area has been well ventilated.
- (6) Apply in a water volume of 200-600 l/ha. For protected tomato, cucumber, aubergine, melon, pepper and courgette apply in a minimum of 1500 l/ha
- (7) This approval extends to professional use only.
- (8) For environmental information refer to the product label but specifically: To protect aquatic organisms respect an unsprayed buffer zone of 1m to surface water bodies from tractor mounted/trailed sprayers. Aim spray away from water.
- (9) For operator protection refer to the product label.
- (10) Adverse effects: Approval holders must immediately submit any new information on the potentially dangerous effects of a product or residues of an active substance contained in a product, on human or animal health, or the environment.

Advisory information:

This approval relates to the use of Movento as a horticultural insecticide for the control of a range of pests as prescribed on the crops & situations listed above.

Resistance Management:

Use Movento as part of an Integrated Crop Management (ICM) strategy. In a spray programme Movento should be used with other insecticides of a different mode of action, either in alternation or as a 2-spray block within the programme

There is limited evidence of crop safety and/or product efficacy available for this extension of authorisation for minor uses and the commercial risk of using this product on the crops/situations listed in this document is borne entirely by the grower.

Total reliance on one pesticide will hasten the development of resistance. Pesticides of different chemical groups or alternative control measures should be included in the planned anti-resistance strategy.

Movento contains Spirotetramat IRAC class: 23 which also includes spirodiclofen and spiromesifen.

IMPORTANT PLEASE NOTE:

Prior to the use of this product, growers should take advice from their crop advisors particularly in relation to the use of this product within an integrated crop management system of production.
